

## JOB DESCRIPTION: UI/UX WEB DESIGNER

We're looking for a UI/UX Web Designer who can design the frontend interface and graphic elements of a website or application. This individual will be responsible for best practices and consistent design standards for each project.

The UI/UX Web Designer will work closely with the creative director, client services, and other developers to ensure each project meets specified requirements, timelines and budgets.

This position requires someone who is creative, detail-oriented, and a problem solver. A positive attitude, and kick-ass work ethic are also welcome.

### PRINCIPAL RESPONSIBILITIES

#### Programming & Technical

- Work with the creative director to plan and design both overall look and feel of websites and/or applications
- Create site architecture user flows, process flows, site maps, and wireframes to communicate design ideas
- Perform HTML, CSS, PHP, and JavaScript programming for all web projects
- Incorporating functionalities and features into web projects
- Work alongside the development team to implement designs into new and existing web projects
- Multi-task a workload of projects, support tickets and other duties as assigned by management

### QUALIFICATIONS

#### Required Skills & Experience

- Proficiency in graphic design software including Adobe Photoshop, Adobe Illustrator, and other visual design tools
- Proficiency in front-end development web programming languages such as HTML and CSS, JQuery, and JavaScript. (Note: Experience with PHP and MySQL a plus!)
- Proficient understanding of cross-browser compatibility issues
- Excellent visual design and communication skills
- Knowledge of accessibility and security compliance
- Strong troubleshooting & debugging skills
- Punctuality, a strong work ethic, and the ability to crush deadlines
- Ability to establish and maintain positive relationships with clients, co-workers
- Ability to uphold the values and vision of Stanton Street at the office and in public
